

Serial No. 10/570,805  
Attorney Docket No. 27275U  
In Response to Office Action of April 13, 2007

**Amendments To The Abstract:**

Please replace the Abstract with the following amended Abstract:

Disclosed is an [[An]] axial fan (1) rotating in a plane (XY) about an axis (2) comprises having a central hub (3)[[,]] and a plurality of blades (4), which have a root (5) and a tip (6)[[,]].  
[[the]] The blades (4) [[being]] are delimited by a concave leading edge (7), whose projection in the fan plane of rotation (XY) is defined by two circular arc segments, and a convex trailing edge (8), whose projection in the fan plane of rotation (XY) is defined by one circular arc segment[[;]]. [[the]] The blades (4) are made from sections with aerodynamic profiles relatively extending in the direction of their centre line, providing good flow rate and air pressure relative to the overall dimensions of the fan.
